

0.6m | 2ft ValuLine High Performance Antenna, single polarized, 37.000 – 40.000 GHz, UBR320 Flange, White Antenna, Grey Radome

#### OBSOLETE

## This product was discontinued on: May 1, 2022 Replaced By:

VHLPX2-38-3WH/D 0.6m

0.6m | 2ft ValuLine High Performance Antenna, dual polarized, 37.000 – 40.000 GHz, UBR320 Flange, White Antenna, Grey Radome

#### Product Classification

| Product Type              | Microwave antenna   |
|---------------------------|---|
| Product Brand             | ValuLine®   |
| General Specifications    |   |
| Antenna Type              | VHLP - ValuLine® High Performance Low Profile Antenna, single-<br>polarized |
| Polarization              | Single  |
| Antenna Input             | PBR320  |
| Antenna Color             | White   |
| Reflector Construction    | One-piece reflector   |
| Radome Color              | Gray  |
| Radome Material           | Composite Broadband   |
| Flash Included            | No  |
| Side Struts, Included     | 0   |
| Side Struts, Optional     | 0   |
| Dimensions                |   |
| Diameter, nominal         | 0.6 m   2 ft  |
| Electrical Specifications |   |
|                           |   |

| Gain, Mid Band                                   | For a given frequency band, gain is primarily a function of antenna size.<br>The gain of Andrew antennas is determined by either gain by comparison<br>or by computer integration of the measured antenna patterns.  |
|--|--|
| Boresite Cross Polarization Discrimination (XPD) | The difference between the peak of the co-polarized main beam and the maximum cross-polarized signal over an angle twice the 3 dB beamwidth of the co-polarized main beam.   |
| Front-to-Back Ratio                              | Denotes highest radiation relative to the main beam, at 180° ±40°, across the band. Production antennas do not exceed rated values by more than 2 dB unless stated otherwise.  |
| Return Loss                                      | The figure that indicates the proportion of radio waves incident upon the antenna that are rejected as a ratio of those that are accepted.   |
| VSWR   | Maximum; is the guaranteed Peak Voltage-Standing-Wave-Ratio within the operating band.   |
| Radiation Pattern Envelope Reference (RPE)       | Radiation patterns define an antenna's ability to discriminate against<br>unwanted signals. Under still dry conditions, production antennas will not<br>have any peak exceeding the current RPE by more than 3dB, maintaining<br>an angular accuracy of +/-1° throughout |
| Wind Speed, operational                          | For VHLP(X), SHP(X), HX and USX antennas, the wind speed where the maximum antenna deflection is 0.3 x the 3 dB beam width of the antenna. For other antennas, it is defined as a deflection is equal to or less than 0.1 degrees.                                       |
| Wind Speed, survival                             | The maximum wind speed the antenna, including mounts and radomes,<br>where applicable, will withstand without permanent deformation.<br>Realignment may be required. This wind speed is applicable to antenna<br>with the specified amount of radial ice.                |
| Axial Force (FA)                                 | Maximum forces exerted on a supporting structure as a result of wind<br>from the most critical direction for this parameter. The individual<br>maximums specified may not occur simultaneously. All forces are<br>referenced to the mounting pipe.                       |
| Side Force (FS)                                  | Maximum side force exerted on the mounting pipe as a result of wind from<br>the most critical direction for this parameter. The individual maximums<br>specified may not occur simultaneously. All forces are referenced to the<br>mounting pipe.                        |
| Twisting Moment (MT)                             | Maximum forces exerted on a supporting structure as a result of wind<br>from the most critical direction for this parameter. The individual<br>maximums specified may not occur simultaneously. All forces are<br>referenced to the mounting pipe.                       |
| Packaging Type                                   | Andrew standard packing is suitable for export. Antennas are shipped as standard in totally recyclable cardboard or wire-bound crates (dependent on product). For your convenience, Andrew offers heavy duty export  |
