HX6-7W-2WH

1.8m | 6ft ValuLine® High Performance, High XPD Antenna, dual-polarized, 7.125 – 8.500 GHz, white, PBR84 flange

Product Classification

Product Type
Microwave antenna

Product Brand
ValuLine®

General Specifications

Antenna Type
HX - ValuLine® High Performance, High XPD Antenna, dual-polarized

Polarization
Dual

Antenna Input
PBR84

Antenna Color
White

Reflector Construction
One-piece reflector

Radome Color
Gray

Radome Material
Fabric

Side Struts, Included
1

Side Struts, Optional
1

Dimensions

Diameter, nominal
1.8 m | 6 ft

Electrical Specifications

Operating Frequency Band
7.125 – 8.500 GHz

Gain, Low Band
40.1 dBi

Gain, Mid Band
40.8 dBi

Gain, Top Band
41.3 dBi

Boresite Cross Polarization Discrimination (XPD)
33 dB

Front-to-Back Ratio
72 dB

Beamwidth, Horizontal
1.5 °

Beamwidth, Vertical
1.5 °

Return Loss
26 dB
### VSWR

| 1.1 |

### Radiation Pattern Envelope Reference (RPE)

| 7377 |

### Electrical Compliance

| ACMA FX03_7p5a | Brazil Anatel Class 2 | Canada SRSP 307.1 | ETSI 302 217 Class 3 |

### Cross Polarization Discrimination (XPD) Electrical Compliance

| ETSI EN 302217 XPD Category 2 |

### Mechanical Specifications

#### Compatible Mounting Pipe Diameter

| 115 mm–120 mm | 4.5 in–4.7 in |

#### Fine Azimuth Adjustment Range

| ±15° |

#### Fine Elevation Adjustment Range

| ±5° |

#### Wind Speed, operational

| 200 km/h | 124.274 mph |

#### Wind Speed, survival

| 200 km/h | 124.274 mph |
## Antenna Dimensions and Mounting Information

### Wind Forces at Wind Velocity Survival Rating

- **Axial Force (FA)**: 6960 N | 1,564.671 lbf
- **Angle α for MT Max**: -130 °
- **Side Force (FS)**: 1566 N | 352.051 lbf
- **Twisting Moment (MT)**: 3923 N-m | 34,721.477 in lb
- **Force on Inboard Strut Side**: 4075 N | 916.097 lbf
- **Zcg without Ice**: 363 mm | 14.291 in
- **Zcg with 1/2 in (12 mm) Radial Ice**: 541 mm | 21.299 in
- **Weight with 1/2 in (12 mm) Radial Ice**: 237 kg | 522.495 lb
Packaging and Weights

- **Height, packed**: 2128 mm | 83.78 in
- **Width, packed**: 544 mm | 21.417 in
- **Length, packed**: 1895 mm | 74.606 in
- **Packaging Type**: Standard pack
- **Volume**: 2.2 m³ | 77.692 ft³
- **Weight, gross**: 145 kg | 319.67 lb
- **Weight, net**: 85 kg | 187.393 lb

* Footnotes
<table>
<thead>
<tr>
<th><strong>Operating Frequency Band</strong></th>
<th>Bands correspond with CCIR recommendations or common allocations used throughout the world. Other ranges can be accommodated on special order.</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Gain, Mid Band</strong></td>
<td>For a given frequency band, gain is primarily a function of antenna size. The gain of Andrew antennas is determined by either gain by comparison or by computer integration of the measured antenna patterns.</td>
</tr>
<tr>
<td><strong>Boresite Cross Polarization Discrimination (XPD)</strong></td>
<td>The difference between the peak of the co-polarized main beam and the maximum cross-polarized signal over an angle twice the 3 dB beamwidth of the co-polarized main beam.</td>
</tr>
<tr>
<td><strong>Front-to-Back Ratio</strong></td>
<td>Denotes highest radiation relative to the main beam, at 180° ±40°, across the band. Production antennas do not exceed rated values by more than 2 dB unless stated otherwise.</td>
</tr>
<tr>
<td><strong>Return Loss</strong></td>
<td>The figure that indicates the proportion of radio waves incident upon the antenna that are rejected as a ratio of those that are accepted.</td>
</tr>
<tr>
<td><strong>VSWR</strong></td>
<td>Maximum; is the guaranteed Peak Voltage-Standing-Wave-Ratio within the operating band.</td>
</tr>
<tr>
<td><strong>Radiation Pattern Envelope Reference (RPE)</strong></td>
<td>Radiation patterns define an antenna’s ability to discriminate against unwanted signals. Under still dry conditions, production antennas will not have any peak exceeding the current RPE by more than 3dB, maintaining an angular accuracy of +/-1° throughout</td>
</tr>
<tr>
<td><strong>Cross Polarization Discrimination (XPD) Electrical Compliance</strong></td>
<td>The difference between the peak of the co-polarized main beam and the maximum cross-polarized signal over an angle twice the 3 dB beamwidth of the co-polarized main beam.</td>
</tr>
<tr>
<td><strong>Wind Speed, operational</strong></td>
<td>For VHLP(X), SHP(X), HX and USX antennas, the wind speed where the maximum antenna deflection is 0.3 x the 3 dB beam width of the antenna. For other antennas, it is defined as a deflection is equal to or less than 0.1 degrees.</td>
</tr>
<tr>
<td><strong>Wind Speed, survival</strong></td>
<td>The maximum wind speed the antenna, including mounts and radomes, where applicable, will withstand without permanent deformation. Realignment may be required. This wind speed is applicable to antenna with the specified amount of radial ice.</td>
</tr>
<tr>
<td><strong>Axial Force (FA)</strong></td>
<td>Maximum forces exerted on a supporting structure as a result of wind from the most critical direction for this parameter. The individual maximums specified may not occur simultaneously. All forces are referenced to the mounting pipe.</td>
</tr>
</tbody>
</table>
### Side Force (FS)

Maximum side force exerted on the mounting pipe as a result of wind from the most critical direction for this parameter. The individual maximums specified may not occur simultaneously. All forces are referenced to the mounting pipe.

### Twisting Moment (MT)

Maximum forces exerted on a supporting structure as a result of wind from the most critical direction for this parameter. The individual maximums specified may not occur simultaneously. All forces are referenced to the mounting pipe.

### Packaging Type

Andrew standard packing is suitable for export. Antennas are shipped as standard in totally recyclable cardboard or wire-bound crates (dependent on product). For your convenience, Andrew offers heavy duty export packing options.
