CommScope’s Value-Added Module (VAM) system adds flexibility and functionality to the optical transport system by enabling service providers to easily incorporate optical components into the network. This versatile platform lays the foundation for the optical network of the future.

CommScope’s VAM Modules feature:

- Enclosed Plug-in modules protect the optical components from physical and environmental damage
- Angled retainers maintain minimum bend radius of fiber patch cords
- Pluggable modules can be added or removed from the chassis without interfering with existing terminated patch cords
- Flexible platform: modules can be created for new applications quickly and easily to meet customer requirements
- Custom configurations are available upon request

The FDF VAM Splitter system consists of a variety of optical component modules that fit into the FDF ODF VAM chassis.

Splitter applications include:

- Signal Splitting, distributing signals to multiple subscribers
- Monitor Testing, troubleshooting networks or monitor traffic without forcing disruption of service
